ELEMENTAL DIET

January 1975 through October 1980

170 Citations

Prepared by Charlotte Kenton

Citations cover the composition, administration, nutritional efficacy, physiologic effects, clinical applications and side effects of elemental or chemically defined or defined formula diet. See also:

Worthen DB Lorimer JR. Enteral hyperalimentation with chemically defined elemental diets. Norwich, N. Y., Norwich-Eaton Pharmaceuticals, 1978. 185 p. (ZWB 400.3 W932E 1978)

best copy available

This bibliography contains references to recent articles selected from some 3,000 English and foreign language journals and a limited number of monographs. Articles from these journals and monographs are indexed for inclusion in *Index Medicus* and other bibliographies produced by the National Library of Medicine. The references in this Literature Search were retrieved from NLM's MEDLINE data base; the dates above show the period during which the references were added to MEDLINE.

Each citation is listed with the descriptors selected from NLM's list of Medical Subject Headings (MeSH) under which the article was indexed. MeSH descriptors of most significance in an article are identified with an asterisk. The article cited will be found in *Index Medicus* only under these starred descriptors.

A bracketed title indicates the article is in a foreign language. For foreign language articles the designation ENG.ABSTR. follows the publication date if the article includes an English abstract; language abbreviation in parenthesis follows.

A full explanation of the elements included in each citation, as well as a complete list of current NLM Literature Searches are included in *Index Medicus and Abridged Index Medicus*. To obtain a current list of Literature Search titles, write: Literature Search Program, Reference Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, Maryland 20209. Please include your name and address typed on a gummed label (no return postage necessary).
